

SE

SE gives a smoother sanded surface and a better final finish as the silicon carbide grains produce less fibre rising and a finer scratch pattern than products using aluminium oxide grains. It has been designed for belt sanding machines or edge sanders. SD gives excellent results in the wood industry for the sanding of paints and solvent-based polyurethane varnishes, UV and, PVC paints. SE has a thicker backing than SD

TECHNICAL DETAILS

BACKING	E-WEIGHT	COATING	CLOSED
GRAIN	SILICON CARBIDE	STEARATE	YES
BONDING	RESIN OVER GLUE ANTISTATIC	GRIT	P180-P600
WIDTH	1420 mm	COLOR	GREY
